

I-Masons: Data Center Design Challenge // Project Ads

Virtual Power Plant **Verticle**

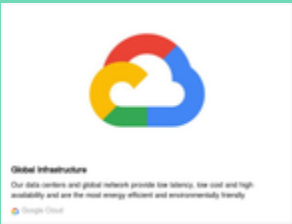

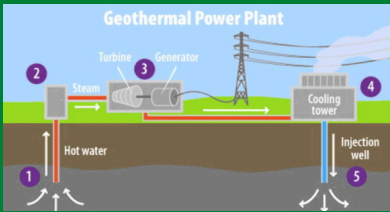

MICROREACTOR

Building Resiliency through Distributed Energy Resources

Proposal for testing
The offset of energy loss from
thermoelectric cooling with the use
of geothermal energy

Location Sourcing

Converting CAD to Web Models

Location Wireframing

Presentation

ORCHESTRATION

The use case for thermoelectric cooling has been cited that it is best utilized for short term high cooling events.

Thermoelectric cooling
Rack Mount Heat solution

Build a Data Center independent of established energy grids

Design the data center to be further redundancy for a decentralized autonomous internet

Communicate Design through 3D web interface
Launch Design as IP

Goals

Serverless

Cloud Native | DNS Solution
